

Subject 2: Practical Topics

What you need to know: This section takes the theories you learned in Units 4, 5, and 6 and puts them into real-world action. These are hands-on skills you will need to practice on a computer.

- **Gmail Creation**

- **What it is:** Setting up your own personal Google email account.
- **Practice Tip:** You will need to navigate to gmail.com and click "Create account." Practice choosing a professional-sounding username (like firstname.lastname@gmail.com) and creating a strong password that mixes letters, numbers, and symbols.

- **Sending Email**

- **What it is:** Composing and delivering a digital message to someone else's inbox.
- **Practice Tip:** Get comfortable with the composition window. Practice filling out the "**To**" field with a friend's email, writing a clear, short "**Subject**" line so they know what the email is about, and typing your message in the main body.

- **Google Drive Usage**

- **What it is:** Using Google's cloud storage service to save and organize your files online instead of on your physical hard drive.
- **Practice Tip:** Once you log into your new Gmail account, find the Google Drive icon. Practice creating new folders in the Drive just like you would on your regular Windows Desktop to keep your online files organized.

- **File Upload/Download**

- **What it is:** Moving files back and forth between your physical computer and the internet.
- **Practice Tip:** Remember the difference!
 - **Upload:** Pushing a file *up* from your computer to the internet (e.g., taking a Word document from your desktop and saving it into Google Drive).

- **Download:** Pulling a file *down* from the internet to your computer (e.g., clicking on a picture someone emailed you and saving it to your computer's "Downloads" folder).

- **Internet Browsing**

- **What it is:** Navigating the World Wide Web using a web browser like Chrome or Edge.
- **Practice Tip:** Practice opening multiple "tabs" so you can look at different websites at the exact same time without closing your current page. Try typing exact URLs directly into the top address bar instead of just searching for everything.

- **Online Form Filling**

- **What it is:** Entering your information into digital documents on websites (such as a school admission form or creating a new social media profile).
- **Practice Tip:** Pay close attention to required fields, which are usually marked with a red asterisk (*). Practice using different form elements like drop-down menus, radio buttons (where you can only pick one option), and checkboxes (where you can pick multiple options), before finally clicking "Submit."
